unplug.

Less bill. More life.

A 3-minute electricity checkup for student flats

3-minute pitch · live demo included · sources cited

THE PROBLEM

Your bill is a black box.

Students overpay because they can't see what's using their electricity.

Invisible

You can't tell which appliance is costing you money — the bill just shows one total.

Generic advice

“Save energy!” — but no one says what to actually unplug in your flat.

Rising prices

Volatile tariffs make guessing expensive, and students feel it first.

THE SOLUTION

Find the villain. Fix it.

Standard 0 kr / month

See what's using your power.

- ✓ Monthly appliance breakdown
- ✓ Biggest-drain ranking
- ✓ Typical wattage library

Premium 65 kr / month

We manage your energy from day one.

- ✓ Personal energy plan
- ✓ Action-by-action savings tracking
- ✓ Month-by-month savings history

Demo runs live in the browser — join free; Premium upgrade is simulated (no real charge).

EXPECTED IMPACT

Savings per student, per year

≈ 400 kWh
electricity saved

≈ 800 SEK
money saved

≈ 36 kg CO_2e
emissions avoided

≈ 20% of a typical 1-room flat (2,000 kWh/yr) · roughly 2× if electric heating is in the bill

If 10,000 students use it: 4 GWh · 8 M SEK · 360 t CO_2e

Sources: Consumption — Energimyndigheten (1-room flat ≈ 1,500–2,500 kWh/yr). Price — SCB household electricity ≈ 2.0 SEK/kWh incl. grid & taxes. CO_2e — Swedish residual mix ≈ 90 g CO_2e/kWh (AIB 2024 / Ei). Saving % — behavioural feedback 10–30% (ScienceDirect). Assumptions: 2,000 kWh × 20% × 2.0 SEK/kWh × 0.090 kg/kWh.

THE MODEL

Free to see. 65 kr to manage.

03
Hook

A free diagnostic gets students in the door — instant value, no card.

03
Convert

65 kr/month Premium pays for itself, then keeps paying the student.

03
Scale

One flat's data multiplies: shared flats, halls, and whole buildings.

Why now: volatile energy prices · cost-conscious students · climate focus at an all-time high

unplug.

Less bill. More life.
